

Computer Science 2 Project	Team Members:	MARQUEZ, WYNSTELLE Z
Group Progress Report		DUROY , GAYLHYNNE P.
3rd Quarter		MORGA, GLENN RAPHAEL S.
		COSTO, ZAVIER ANDREI
Week 1 - Jan 16, 2026 (covers week 1-3 of proj sched)		
GOAL State your goal for the Week	DATA COLLECTED State/list the data collected relevant to your project	PROGRESS State the progress you have made so far by the end of the week
Our goal for this week is to start off with the main features relevant to our program, or formulated a blue print on where we can start on with our app.	1, System performance data (Status: partially working) -Bugs have been found (working on it) 2. Academic data: Sample assesment scores and pre-defined grading weights (for diverse grading systems)	By the end of the week, we have already started off with the grade calculator feature and our task overview feature. However, there are some areas of our format where we might find ourselves struggling in at the moment.
STRENGTH		
We have multiple resources to work with. And even if we dont have a specific IDE at the moment, we've decided to divide the tasks between the 4 of us members, and work on them individually. Which really showed that it was a good idea considering we can test each feature individually before combining all these features in the end.		
AREAS FOR DEVELOPMENT		
One thing i've noticed though is the group's time management and timely response - there are times where some of the team members barely respond,so we have a hard time in tracking each development's p progress efficiently. This may cause our project reports to get updated much slower compared to the progress of the program.		
STRATEGY FOR SUCCESS		
We've decided that one person should not have to handle the entire project report - it will be a rotation between the 4 team members, depending on who is making the most progress on that week. Another strategy has something to do with the development of our code - Since we've only got a couple of weeks for the 3rd quarter, our strategy is to keep the code simple for each feature, since we're doing it one step at a time; We start doing modifications once we've pieced up together all of our codes.		

Computer Science 2 Project	Team Members:	MARQUEZ, WYNSTELLE Z

Week 2 - Jan 23, 2026 (covers week 4)		
GOAL State your goal for the Week	DATA COLLECTED State/list the data collected relevant to your project	PROGRESS State the progress you have made so far by the end of the week
Our goal for this week is to finish up the rest of the features before combining them all into one library (implementation of main setup)	1, System performance data (Status: partially completed)	1. Accomplished grade tracker code
	-slim % of bugs have been fixed (initial)	2. Accomplished Task overview code
	2. Academic data	3. In the process in implementing smart categorization' alongside main functionality
	3. Student performance data	
STRENGTH		
Our strengths at the moment is our determination and confidence in completing our project		
AREAS FOR DEVELOPMENT		
Lack of group cooperation, untimely responses from group members (most of the time inactive, or just dont respond at all),		
STRATEGY FOR SUCCESS		
With a bit of tweaks, we still decided to stick with the concept of coding each feature separately. However, one person will be correcting the code per feature. One person will handle 2 codes and partial responsibility for the progress report paper.		
2 people will now be handling the main program as of january 28 until the partial completion (week 4)		
And for those members who dont know how to code, we've decided to go through using AI programs in assisting us, youtube tutorials, and github templates.		

Computer Science 2 Project	Team Members:	MARQUEZ, WYNSTELLE Z

Week 3- Jan 30, 2026 (covers week 5)		
GOAL State your goal for the Week	DATA COLLECTED State/list the data collected relevant to your project	PROGRESS State the progress you have made so far by the end of the week
1. Complete most of the program by then,	1) sample user information data	By the end of the week, we have already
2.have already formulated the web design	2) Grades and percentage data	formulated an initial web design for our
3.find a functional UI that can support	3) Configuration and testing of each task	program with slight errors in formatting
our program	seperately	We have already completed most of the
		features neccesary in building the frame-
		work.
STRENGTH		
Our strengths for this week were challenged by a time crunch. Though, we were efficient enough to gain leverage due to the framework of our code. One of our most notable strengths is how we can 'divide and conquer' our tasks equally.		
AREAS FOR DEVELOPMENT		
Same factors from the last 2 weeks - still no development in time management and cooperation (takes multiple chats for a member to finally respond, or dont respond at all)		
STRATEGY FOR SUCCESS		
After another set of adjustments, we ended up dividing the coding tasks between 2 people. While the other 2 will be handling the reviewing and debugging of the program. Starting from february 1, the continuation of the code will be rotated between the 2 people who were assigned to the program.

Week 4 - Feb 6, 2026 (covers week 6)		
GOAL State the goals committed	DATA COLLECTED State/list the data collected relevant to your project	PROGRESS State the progress you have made so far by the end of the week
1) Finalized the task manager feature	same set of data collected from WEEK 3	1) Finalized the task manager feature
2) finalized the quiz generator feature		2) finalized the quiz generator feature
3) finalized grade calculator feature		3) finalized grade calculator feature
we hope to finally have created the entire program, including web design, and the integration of the quiz generator (JSON)		
STRENGTH		
Our strengths for this week were challenged by a time crunch. Though, we were efficient enough to gain leverage due to the framework of our code. One of our most notable strengths is how we can 'divide and conquer' our tasks equally.		
AREAS FOR DEVELOPMENT		
Still the same factors from the past 4 weeks, no development in attitude and timeliness. Though we have 'completed' the framework of our program, efficiency and time management can't be seen, leading them to doing their work in a time crunch (cramming).		
STRATEGY FOR SUCCESS		
Considering that this is the last week, MARQUEZ W. took over on finalizing the program to speed things up.		
The other members have been assigned in writing the report for our project, and some slight responsibility over debugging the program.
