

COMPUTER SCIENCE II

QUARTER 4

SHORT REFLECTION

Costo, Xavier:

Since the beginning, we as a group have experienced many ups and downs because of poor teamwork and ineffective communication. Despite these difficulties, the project gave me the opportunity to apply what I've learned in CS 2. By putting my knowledge into practice alongside my groupmates, the concepts became easier to understand.

At the same time, I've learned valuable lessons from my own mistakes and recognized the importance of collaboration and clear communication.

Duroy, Gaylhyne:

This project allowed me to apply what we have learned in CS II, helping my group develop a deeper understanding of the material. By putting our knowledge into practice, the lessons became easier to grasp and more meaningful.

Overall, the project made my CS 2 experience more engaging and enjoyable.

Morga, Glenn Raphael:

Since the beginning of this project, we have experienced many ups and downs due to factors such as poor teamwork and ineffective communication. However, we will use this experience as an opportunity to learn from our mistakes and continue improving ourselves.

Moving forward, I will strive to take not only this project but also our academics in general more seriously.

Marquez, Wynstelle:

From the start until the end of this project, I've realized one thing – Programming is not just about creating and debugging codes.

It is about being patient when programs don't seem to work, and learning from mistakes when it is important. This project has made me see that.

In terms of group dynamics, it has also taught me that I will NEVER be in a group where everyone just understands each other immediately. There will always be ups and downs, and that is also part of the progress.

In general, this project has not only taught me handy coding skills, but has also given me a sense of responsibility and understanding.
